## **Introduction**

eVESTX Swap is a DEX (decentralized exchange) created with the aim of allowing the most varied types of trading and investment for its users, with a design made to make everything very simple and practical, in order to provide a quick and accurate understanding for all users, both lay and advanced users. Having the lowest rates available in the current market, with operations being carried out both in the side chain and in the main chain, in addition to several bridges between chains that undergo constant review and testing, in order to allow a safer platform for all users.

## **Chain Operation**

In eVESTX Swap, the default chain to be used for trading and investment operations is the main chain, due to its high performance and scalability. It is possible to send values traded on eVESTX by the main chain to the side chain or to other chains through the links present in the "Account" tab, under "Deposit/Withdrawal".

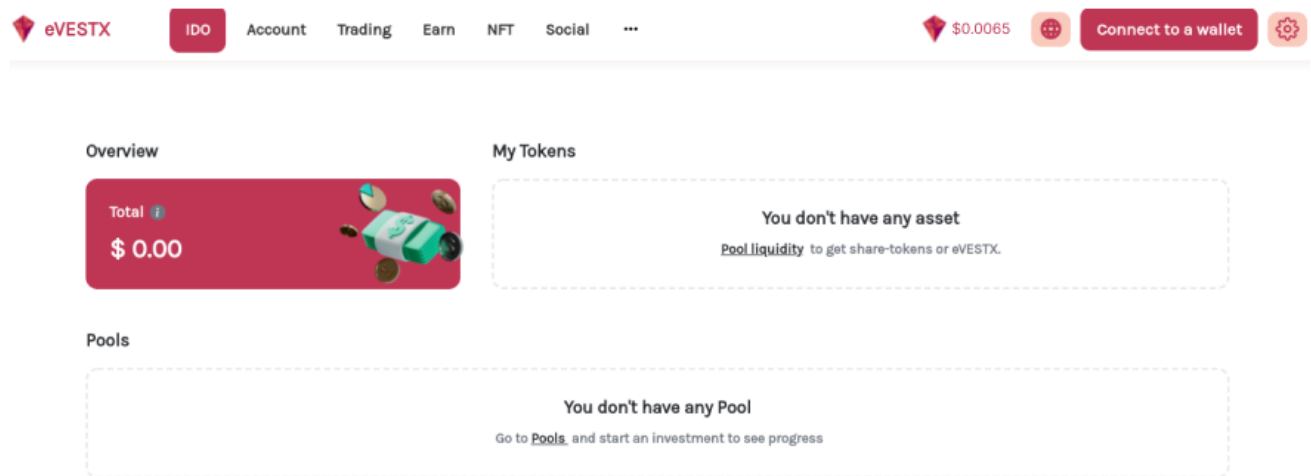

## **IDO**

eVESTX Swap is doing the IDO (Initial DEX Offering) of eVESTX for investors interested in the technology and project, in which it is possible to invest in eVESTX using USDT, USDC, BUSD and BNB for this. The IDO will remain active until the IDO counter reaches zero, thus initiating the eVESTX distribution step presented in the IDO tokenomics based on the blockchain height, in which, when the blockchain confirms a new block, a certain amount of eVESTX is released to each wallet that is part of tokenomics based on the total amount to be received.

## **Account**

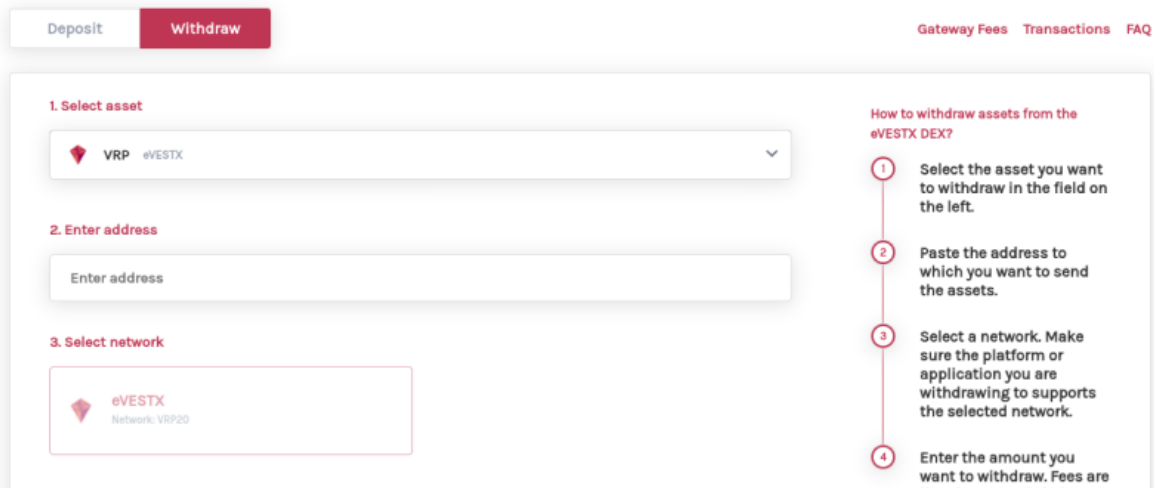

## Portfolio

In the "Account" tab, in "portfolio", it is possible to view your portfolio in relation to Pools, with amounts invested in Pools, LP tokens and the total value of your investment converted to your country's currency.

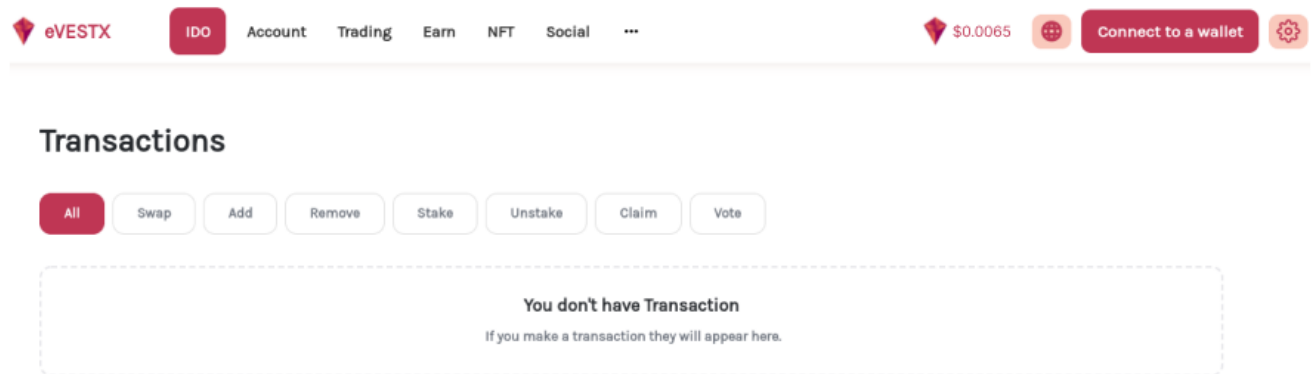

## Deposit/withdraw

On the "Account" tab, under "Deposit", it is possible to view the options for depositing and sending values through bridges between the available blockchains for the currency selected for this.

## Transactions

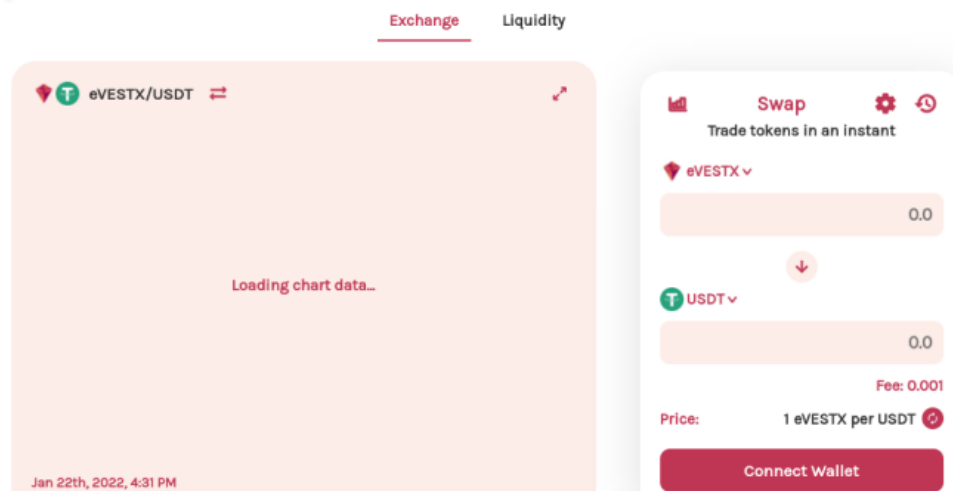

In the "Account" tab, under "Transaction", it is possible to view the transactions made by your account on the eVESTX blockchain, both for the main chain and for the side chain, but only the part one in use by the user.

## Trading

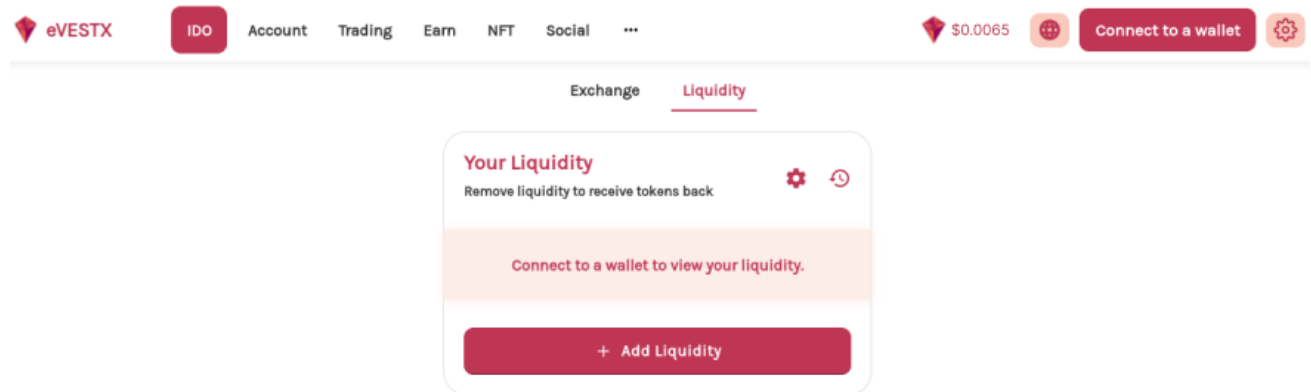

### Exchange

On the "Trading" tab, under "Exchange", it is possible to view the party for trading the token present on the eVESTX blockchain which uses the AMM protocol for this.

## Liquidity

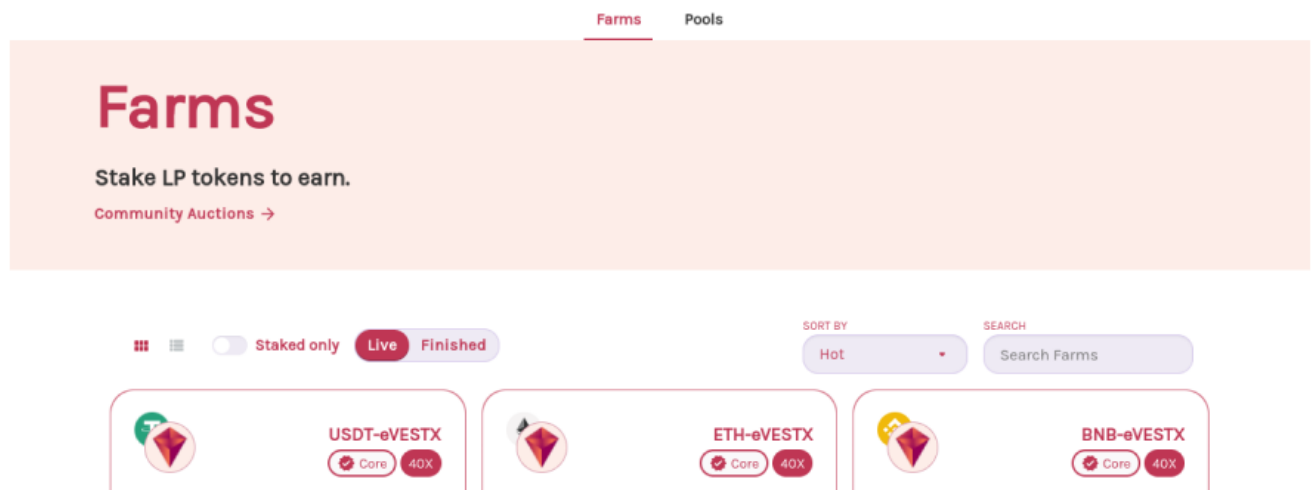

In the "Trading" tab, under "Liquidity", you can add and remove liquidity to get your tokens back at any time.

## Earn

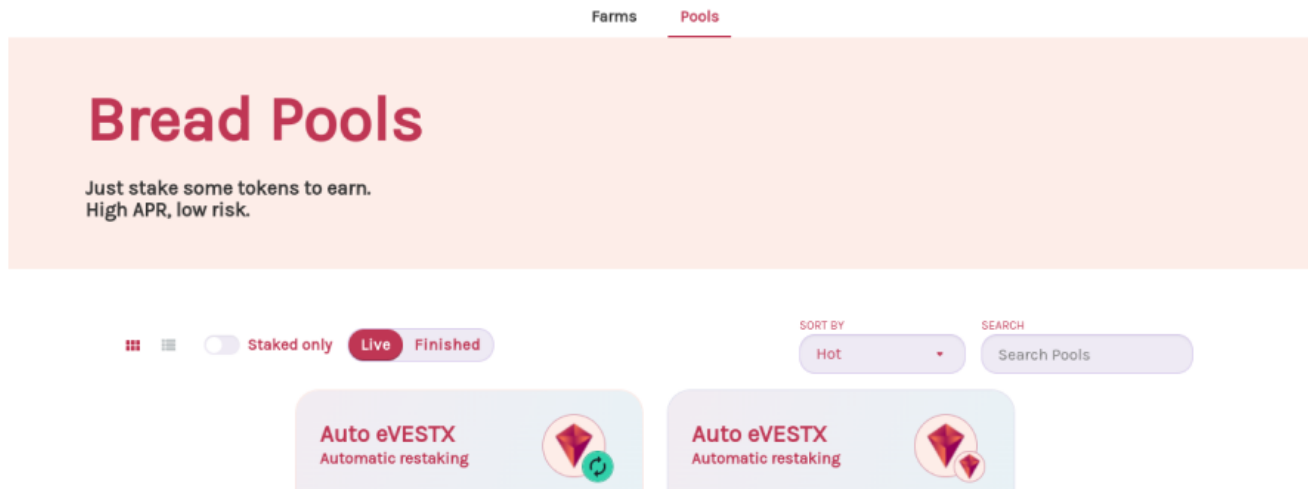

### Farming

In the "Earn" tab, under "Farming", it is possible to stake LP tokens to earn rewards and profit from it.

## Pools

In the "Earn" tab, under "Pools", it is possible to stake eVESTX for any token and earn as a reward that token you bet eVESTX on.

## Bridges

The bridges serve to connect the eVESTX Swap with other blockchains, in order to provide the transfer and receipt of values to any available chain for the transfer of the chosen token. eVESTX Swap bridges have passed rigorous security and penetration tests, in order to provide a safe and unique experience, they will also undergo a constant security and penetration review to always keep the bridges safe and allow the user to have more security in their use.

# Tokenomics

## eVESTX Distribution

The planned distribution of eVESTX emission.

## Conclusion

With very low fees and with the addition and creation of new future technologies for a wide range of choice, eVESTX Swap comes to innovate and provide new ways to make your money pay more and more with security and versatility, for all users, a decentralized way.
